

**FOR IMMEDIATE RELEASE**

## **PureSafety Releases Newest Version of Occupational Health Manager<sup>®</sup> (OHM<sup>®</sup>) Software**

*Latest release includes fully integrated MDGuidelines, ROI-based clinic management reporting and enhanced features to manage the entire employee workforce lifecycle*

**FRANKLIN, Tenn. – February 17, 2011 – [PureSafety](#)**, the leading provider of workforce health and safety software solutions, has released the newest version of its [Occupational Health Manager](#) (OHM) software, which includes powerful new features to prove the value of occupational health clinics and provides return-to-work benchmarking, among other new functionality.

New clinic scorecard tools clearly demonstrate an occupational health clinic's impact in keeping employees healthy and at work, which helps users prove return on investment with increased productivity and lower costs. A new partnership with [Reed Group<sup>®</sup>](#) provides fully integrated Medical Disability Advisor guidelines (MDGuidelines) to help clients compare their return-to-work statistics against MDA and industry benchmarks while integrating completely into clinic workflow and reporting. Case managers, nurses and safety professionals can better manage employees on disability with instant access to MDGuidelines from within OHM, automatic calculation of the date when employees on disability are expected to return to work and benchmark tools to report case and claims progress.

"PureSafety is dedicated to helping our clients leverage the power of their own employee health information to continually improve workflow and report on their clinics' successes," said Bill Grana, PureSafety's president and chief executive officer. "Our

newest enhancements and partnerships reflect PureSafety's dedication to the occupational health and safety market by continuously expanding features that save users time and make a positive impact on their companies' return on investment."

Other new features include the ability to personalize report and data preferences and to easily access favorite reports from the dashboard. Other enhancements include preconfigured date ranges, enhanced alerts and more user-friendly grids. An improved appointment scheduler features more visual, drag-and-drop functionality; vaccination recording improvements now allow tuberculosis/PPD readings to be entered in batches and alternate tuberculosis testing options have been added.

OHM's powerful tools help manage the entire workforce lifecycle, from initial hire and screenings, to injury prevention, corrective actions and return-to-work programs. OHM empowers executives with the most accurate, up-to-date information they need, while helping end-users to be more productive and keep their people healthy, safe and on the job.

### **About PureSafety**
